One example of a cyberattack is **Insider Threats** —this is a form of security breach/ losses caused by humans. For example, employees, contractors, and/or customers. Insider Threats can be either malicious or negligent in nature, but does not set aside the fact that it can be highly disruptive for business activities and operations that are in the digital platform.

How Can We Avoid Such Issues?

A brief introduction to **MxDR** — stands for *Managed eXtended Detection & Response*, a cybersecurity service that is a mixture of advanced technology and human expertise to perform threat hunting, monitoring, and response to findings for various internet users. The main benefit of MxDR is that it helps rapidly identify and limit the impact of threats without the need of additional staffing.
